

GreenGo — QA Test Report

Automated frontend suite (Flutter) · generated 2026-07-15 · Master Test Plan Phase 1–2

415
TOTAL TESTS

411
PASSED

0
FAILED

4
SKIPPED

100.0%
PASS RATE (EXECUTED)

Verdict: 411 of 411 executed tests pass (100.0%), 0 failures. The 4 skips are documented fake-backend limitations (transaction/increment emulation) and are covered by the emulator layer.

Results by category

CATEGORY	TESTS	PASS	SKIP	FAIL	STATUS
Authentication & Session	67	67	0	0	PASS
Business / Storefront	16	12	4	0	PASS
Chat / Messaging	36	36	0	0	PASS
Membership / Coins	46	46	0	0	PASS
Communities	10	10	0	0	PASS
Events — date/geo logic	10	10	0	0	PASS
Events — bloc / datasource	32	32	0	0	PASS
Discovery / Explore	5	5	0	0	PASS
Localization (7 locales)	31	31	0	0	PASS
Notifications	28	28	0	0	PASS
Onboarding	29	29	0	0	PASS
Other	32	32	0	0	PASS
Profile	48	48	0	0	PASS
Search	25	25	0	0	PASS

Regression coverage (this cycle's fixes)

FIX	WHAT THE TEST GUARDS	AREA
Communities concurrency-merge	Handlers merge onto current state via copyWith; concurrent loads no longer clobber managedCommunities ("My communities" appears).	Communities
Tips/Announcements/Chat classification	language_tip/cultural_fact/city_tip → Tips; announcement → Announcements; text → chat.	Communities
Discover joinable + getCreatedCommunities	Public-only Discover; My-communities via createdByUserId (no member-doc dependency).	Communities
Live-event date validity	Only well-formed yyyy-MM-dd, today-onward; junk like "1" rejected; ≤1-week fallback window.	Events – date/geo logic
50km / 100km geo filters	Haversine distance drives the within-radius event filters.	Discovery / Explore
Business chat identity	Business-inquiry conversations render businessName + coverImageUrl (not the personal name).	Chat / Messaging
Business tab routing	A business viewer's inquiries are excluded from the personal Messages filters.	Chat / Messaging
Rate-this-business hides after rating	Rating control returns SizedBox.shrink when the viewer already rated / is self.	Business / Storefront
Search excludes deleted + dual business	Non-active/ghost/admin excluded; a business owner appears as both People and Business.	Search
Notifications optimistic delete-all	NotificationsAllCleared emits NotificationsEmpty immediately before the server delete.	Notifications
Events earliest-first	EventsLoaded.upcomingEvents sorts ascending by startDate.	Events – bloc / datasource
i18n key parity + no mojibake	Every en key exists across 7 locales; no replacement chars / classic mojibake.	Localization (7 locales)

Skipped (documented)

- **Business / Storefront** — rateBusiness a second distinct rater increments sum and count
- **Business / Storefront** — rateBusiness re-rating shifts sum by delta, count unchanged
- **Business / Storefront** — aggregate reads getAggregate computes avg = sum / count
- **Business / Storefront** — aggregate reads myRating stream emits the viewer current stars

Backend & performance — pending (emulator-gated)

The frontend suite runs on a fake in-memory Firestore + mocked auth (no emulator). The following backend/perf phases require the Firebase emulator + a Jest harness and are the next phase of the Master Test

Plan:

- B1 Firestore Security Rules (@firebase/rules-unit-testing) — emulator
- B2 Cloud Functions (Jest + firebase-functions-test) — emulator
- B3 Index / query validity end-to-end — emulator
- B4 Data-integrity counters (memberCount/unreadCount/ratingSum) — emulator
- B5 Performance budgets (query latency, scroll fps, cold start, CF exec) — emulator + device
- B6 E2E mock-user journeys (login→discover→join→chat→rate) — emulator

GreenGo · package greengo_chat · test harness: flutter_test + mocktail + fake_cloud_firestore + firebase_auth_mock · personas mock_user_1..5 · see docs/testing/GREENGO_MASTER_TEST_PLAN.md
